Professional Summary

DevOps and Cloud Engineer with hands-on experience building AWS-based infrastructure, CI/CD pipelines, containerized service deployments, Infrastructure as Code, and production observability. Built automated delivery workflows with GitHub Actions, SonarQube, and SAST; provisioned AWS environments with Terraform and Ansible; and designed monitoring and alerting using Prometheus, Grafana, Loki, Promtail, and Alertmanager. Skilled in Linux, Docker, Kubernetes, Bash/Python automation, cloud monitoring, incident detection, and reliable production releases.

Technical Skills

Cloud and Infrastructure: AWS (EC2, VPC, IAM, S3, RDS, ElastiCache, CloudWatch, Route 53, Auto Scaling Groups), Infrastructure as Code, Terraform, Ansible

DevOps and CI/CD: GitHub Actions, CI/CD, DevSecOps, Git, GitHub, Docker, Docker Compose, Kubernetes, multi-stage Docker builds, release automation

Observability and Reliability: Prometheus, Grafana, Loki, Promtail, Alertmanager, monitoring, logging, alerting, health checks, anomaly detection

Systems and Networking: Linux (Ubuntu), Nginx, reverse proxy, load balancing, Docker bridge networks, security groups, IAM

Security and Quality: SonarQube, SAST, static analysis, vulnerability scanning, code-quality gates, encrypted secret management

Languages: Python, Bash, SQL

Experience

DevOps & Cloud Engineer

Grok Digital

Jan 2026 – Present
Jammu & Kashmir, India

- Architected an end-to-end production observability stack using **Prometheus, Grafana, Loki, Promtail, and Alertmanager** for a QCC Command Centre, reducing anomaly-detection time by approximately **65%** with zero missed production incidents.
- Built a **DevSecOps CI/CD pipeline** using **GitHub Actions**, AI-assisted code testing, self-hosted **SonarQube** quality gates, and **SAST** security scanning to enforce automated build, test, quality, and security checks on every commit.
- Containerized and deployed an internal microservice using **Docker**; designed multi-stage builds that reduced image size by approximately **55%** and owned the production rollout.
- Contributed to the **AWS cloud deployment architecture**, defining infrastructure topology, auto-scaling policies, and separate staging and production environments for a command-and-control platform.

Projects

CI/CD-Driven Cloud Infrastructure Deployment on AWS

AWS EC2, Docker, Nginx, GitHub Actions, IAM

- Designed and deployed a three-tier AWS EC2 environment with Nginx as a reverse proxy and load balancer, Dockerized services, IAM-based access control, and automated health checks.
- Implemented a GitHub Actions CI/CD pipeline that automated build, test, and deployment stages with encrypted secret management, enabling repeatable production releases.
- Applied multi-stage Docker builds to reduce image size by approximately **60%** and address memory bottlenecks.

Automated AWS Infrastructure Provisioning with Terraform & Ansible

Terraform, AWS, Ansible, GitHub Actions, IAM

- Provisioned a reusable AWS environment—VPC, EC2, S3, security groups, and IAM roles—using modular **Terraform** Infrastructure as Code for consistent development and production deployments.
- Automated server configuration with **Ansible** playbooks, reducing environment setup time by approximately **80%**; integrated the infrastructure workflow into GitHub Actions for automated provisioning after merges.

Education

Bachelor of Technology in Computer Science & Engineering | CGPA: 8.3/10

Shri Mata Vaishno Devi University

2022 – 2026
Jammu & Kashmir, India

CBSE Class XII

Kendriya Vidyalaya Sunjuwana

2022
Jammu & Kashmir, India

Certifications

- AWS Academy Graduate — Amazon Web Services
- AWS Cloud Quest: Cloud Practitioner — Amazon Web Services
- Entrepreneurship — NPTEL, IIT Madras | Education for Sustainable Development — NPTEL, IIT Madras
